Ryan Brownewell

Engineering Manager | High-Trust Teams, Reliable Releases | Quality-Minded Technical Leader

Cumberland, ME · ryanbrownewell.com · linkedin.com/in/ryan-brownewell

Engineering manager with 7+ years leading people and 14 years in software; came up through test automation engineering (C#, Python) to lead cross-functional teams in regulated digital health and industrial software.

EXPERIENCE

MedRhythms

Dec 2021 – Sep 2026

Engineering Manager *Dec 2023 – Sep 2026*

Managed a six-person, cross-stack team (five developers, one QA) for two regulated neurorehabilitation products; owned 1:1s, performance reviews, hiring, sprint delivery, release planning, and vendor relationships.

- Kept the team intact through multi-year budget constraints; only one voluntary departure.
- Cross-trained engineers to flex between stacks, letting a small team cover many workstreams.
- Delivered three mobile releases a year, 100% on time, with regulatory risk reviews and HITRUST/HIPAA support.
- Reworked release planning, the team's top retro pain point, until releases ran smoothly.
- Introduced rotating support coverage, protecting sprint focus while keeping production issues owned.
- Primary engineering partner to Operations and Quality/Regulatory leaders, balancing speed against compliance risk.
- Built OCR patient intake automation (AWS Lambda/Textract, Salesforce Flow), cutting entry from 30 to 5 min per form.
- Wrote engineering's AI usage policy proposal after a committee effort stalled.

Engineering Senior Supervisor *Aug 2022 – Dec 2023*

- Promoted within eight months; managed 3 to 6 engineers, growing from one team to two.
- Served as Scrum Master, owning team process, productivity, and health; hired a QA engineer.
- Partnered with the VP of Engineering to prioritize work across teams.

Software Quality Assurance Engineer *Dec 2021 – Aug 2022*

- Sole Android tester for a regulated digital therapeutic; owned test plans and cases in Zephyr.
- Advocated for patient experience and therapy quality, not just functional correctness.
- Authored regulatory documentation supporting medical-device compliance.
- Contributed to mobile test automation with Detox.

PTC (Kepware)

Jun 2012 – Dec 2021

Quality Assurance Manager *Aug 2021 – Dec 2021*

- Managed five direct reports and three offshore contractors.
- Led the offshore team to stabilize 100+ automated tests.
- Partnered with the Directors of QA and Development on cross-department initiatives.

Quality Assurance Group Lead *Oct 2018 – Aug 2021*

- Hybrid role: half people manager, half individual contributor, with three direct reports.
- Cut release regression testing from ten days to five.
- Founded and led the Automation Guild, a biweekly forum for test automation best practices.

Senior Software Automation Engineer *Jan 2016 – Oct 2018*

- Led Scrum teams building automated tests in C#; built shared test infrastructure across teams.
- Mentored engineers through code reviews.

Earlier: Software Automation Engineer and QA Engineer, Kepware Technologies (2012 to 2016)

SKILLS

Leadership: Engineering management, hiring, release planning, Agile/Scrum

Technical: TypeScript, Node.js, React Native, AWS (Lambda, Textract, S3, SES), Salesforce (Flow), Python, C#/.NET, SQL

Quality: Test automation strategy, regulatory risk review, Detox, Zephyr, Jira/Atlassian

Projects: github.com/browniewell; AI-assisted development (Claude Code), from fully AI-written to hand-written code

EDUCATION

B.S. Computer Engineering, minor in Mathematics, University of Maine 2012

COMMUNITY

Extra Life: Raised $10,000+ for Barbara Bush Children's Hospital over eleven years; helped lead the Portland chapter.
